PODD40A micro-Guidance Pod

Model: PODD40A

PRODUCT DESCRIPTION

The PODD40A micro-pod features an extremely compact structure, weighing less than 80g. It is equipped with servo image stabilization and built-in tracking recognition functions, adopts a wide voltage input of 12-16V, and is equipped with dynamic power consumption control. All electronic components are integrated in a metal shell package, which complies with EMC design specifications, achieving an efficient balance between lightweight and functionality.

TECHNICAL PARAMETER

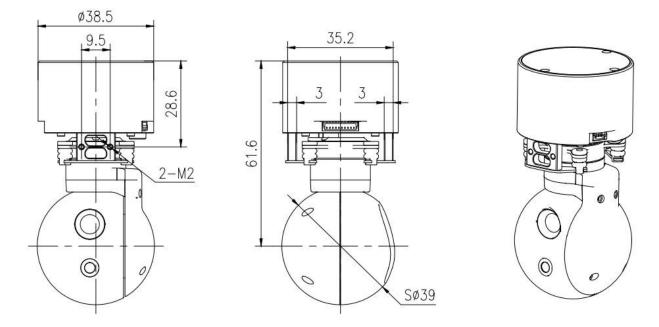

| System specification | | | | | | | |
|---------------------------|-------------------------|--|--|--|--|--|--|
| System type | Gyro stability | | | | | | |
| Weight | $\leq 80 \mathrm{g}$ | | | | | | |
| System cha | racteristics | | | | | | |
| Platform type | Two-axial | | | | | | |
| Pitch | -120°~+120° | | | | | | |
| Roll | -90°~+30° | | | | | | |
| Max angular velocity | ≥30°/s | | | | | | |
| Vibration angle | 0.2mrad(1°/2Hz)(1σ) | | | | | | |
| Encoder accuracy | ≤0.3° | | | | | | |
| Visible Light Imaging | g (large field of view) | | | | | | |
| Resolution and frame rate | 1920×1080@30fps | | | | | | |
| FOV | 98.5°×66.3° (2.4mm) | | | | | | |
| Visible Light Imaging | (narrow field of view) | | | | | | |
| Resolution and frame rate | 1920×1080@30fps | | | | | | |
| FOV | 30°×17.1° (10.36mm) | | | | | | |
| Tracking | g module | | | | | | |
| | | | | | | | |

| Tracking speed | 32 pixels / frame (32×32 person) 48 pixels / frame (48×48 car) | | | | | |
|---------------------------|---|--|--|--|--|--|
| System external interface | | | | | | |
| Control interface | TTL | | | | | |
| Video output | Network RTSP | | | | | |
| Power | supply | | | | | |
| Supply voltage | 12V~16V | | | | | |
| Power consumption | Av.≤5W Max.≤8W | | | | | |
| Environmental condition | | | | | | |
| Working temp | -20°C~+60°C | | | | | |
| Storage temp | -20°C~+60°C | | | | | |

MECHANICAL STRUCTURE

CONTROL PROTOCOL

1 Scope

This agreement specifies the data communication process and control protocol between DYT and controllers (such as flight control and pod controllers).

2 Communication between DYT and Controllers

2.1 Data Communication Process

a) The controller sends instructions to DYT. The instruction content is shown in Table 1. All instructions are trigger-type and only need to be sent once.

https://erdicn.com **Email :** sales@erdicn.com **Tel:** +86-28-81076698 **Fax:**+86-28-87897578

b) After DYT powers on and completes self-check, it sends information to the controller at a cycle of 16.7 ms. The information content is shown in Table 2.

c) For multi-byte variables, the low byte comes first, followed by the high byte.

d) The default baud rate of the serial port is 115200, and the parity check mode is no parity.

e) When target position calculation and data guidance functions are required, the attitude angles and latitude-longitude information of the carrier aircraft need to be sent to DYT at a frequency of 1–60 Hz.

f) SEI information is data superimposed in the H.264 video stream and is disabled by default.

2.2 Communication Protocol

| | I | 1 | | |
|------|-------------|-------|--|----|
| | | | When Control Information = $0x5A$ (Specify Zoom Factor): | |
| | | | Represents the zoom factor in units of 0.1x. | |
| | | | When Control Information = $0xB0$ (Lifting Control): | |
| | | | 0 = Stop, $1 =$ Ascend, $2 =$ Descend. | |
| | | | When Control Information = 0x4A (Image Board Power Control): | |
| | | | 0 = Restart, 1 = Power On, 2 = Power Off. | |
| | | | Default value is 0. | |
| | | | When Control Information = $0x0D$ (Point Tracking): | |
| | | | Represents the vertical pixel coordinate of the locking point. The | |
| 5 (| | | image center is 0. | |
| | | - 1 - | When Control Information = $0x24$ (Pan/Tilt Search): | |
| 5,6 | Parameter Y | S16 | Represents the pitch rotation speed in units of $0.1^{\circ/s}$. | 2 |
| | | | When Control Information = $0x26$ (Specify Frame | |
| | | | Angle), 0x32 (Azimuth Scanning), or 0x3B (Specify Spatial | |
| | | | Angle): | |
| | | | Represents the pitch angle in units of 0.01°. | |
| | | | When the control information is 0x01 to 0x04: It represents the | |
| | | | small picture in picture-in-picture. | |
| | | | 0 = Cancel multi-screen; | |
| | | | 1 = Visible 1; 2 = Visible 2; | |
| 7 | Parameter 3 | U8 | 3 = Infrared 1; $4 = $ Infrared 2; | 1 |
| | | | When the small picture is the same as the large picture, the | |
| | | | multi-screen is canceled. | |
| | | | When the control information is 0x32 "Azimuth Scanning", it | |
| | | | represents the scanning speed, where 1 bit = $0.2^{\circ}/s$. | |
| | | | When the control information is "Zoom Command", 0 to +100 | |
| 8 | Zoom Rate | S8 | represents the zoom-in rate, and 0 to -100 represents the zoom-out | 1 |
| | | | rate. | |
| 9~14 | Кеер | | | 6 |
| 15 | Checksum | U8 | Start adding from the 0th byte, and take the lower 8 bits. | 1 |
| | Total | | | 16 |
| | 1 | 1 | 1 | 1 |

When the control information is 0x3a "Data Guidance", bytes 3 to 14 are as shown in the following table.

| Byte Sequence Number | Parameter Name | Data Type | Unit | Explanation | Bytes Occupied |
|-------------------------|----------------------|-----------|------------|--|----------------|
| 3 | Data Guidance Status | U8 | | 0x00: Exit Geographic Tracking 0x01: Geographic Tracking of Current Field of View Center Position 0x02: Geographic Tracking of Specified Position 0x0A: Calibration Based on Known Target | 1 |
| 4~7 | Target Latitude | Int32 | 10^-7 ° | | 4 |
| 8~11 | Target Longitude | Int32 | 10^-7 ° | | 4 |
| 12, 13 | Target Altitude | S16 | 0.2m | | 2 |

| 60 Frame Count U8 0-255 cycle | 1 |
| 61、62 Reserved | 2 |
| 63 Checksum U8 Start adding from byte 0 and take the lower 8 bits. | 1 |
| Total | 64 |

2.3 Network Control

When network control is required, establish a TCP connection to port 2000 of the pod. The TCP protocol is encapsulated

https://erdicn.com **Email :** sales@erdicn.com **Tel:** +86-28-81076698 **Fax:**+86-28-87897578

based on the above-mentioned protocol, while the protocol returned by the pod remains unchanged as described above.

| Byte Sequence Number | Name | Content | Explanation |
|-------------------------|--------------|---------|---|
| 0 | Frame Header | 0xeb | |
| 1 | Frame Header | 0x90 | |
| 2 | Data Length | Ν | U8 type, where N is the data length. |
| 3~2+N | Data | EB 90 | |
| 3+n | Checksum | | Start accumulating from the 3rd byte and take the lower eight bits. |

Example: eb 90 10 eb 90 2b 00 00 00 00 00 00 00 00 00 00 00 00 a6 4c (4c is the checksum, starting accumulation from the second eb)

Where: eb 90 2b 00 00 00 00 00 00 00 00 00 00 00 00 a6 is the valid data (a6 is the checksum, starting accumulation from eb)

DYT HOST COMPUTER SOFTWARE OPERATION INSTRUCTIONS

1. Connection Schematic Diagram

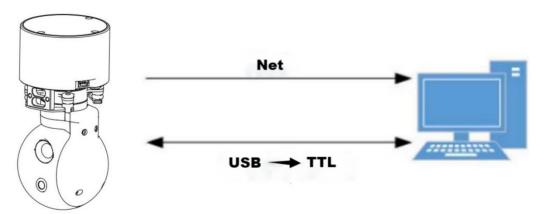

Figure 1 Test Connection Schematic Diagram

2 Pre-power-on Preparations

- 2.1 Pre-power-on Preparations
- 1) Please install the pod in a suspended manner as shown in Figure 2.
- 2) Connect the wires according to the correct wiring sequence.
- 3) Use a USB-to-TTL cable and a network cable to connect the pan-tilt to the computer.
- 4) Check the power supply voltage, then power on.

3 Operation of the Host Computer

3.1 Power On

Turn on the control software and connect the pod's video source and control interface to the computer according to requirements.

| Control | Connection Common Control Plug-in Settings Factory Calibration Parameter Settings |
|---------|--|
| | Control |
| | Serial Port Serial Port Network Port |

Figure 3 Open Interface

3.1.1 Control Interface Connection

The control interface supports serial port control or network port control.

For serial port control: As shown in Figure 4-1, select the "Serial Port" tab, click the serial port drop-down list, select the corresponding serial port number of the pod, and click "Connect".

For network port control: As shown in Figure 4-2, select the "Pod Network Port" tab, enter the pod's IP, check "Add EB90", and click "Connect".

After a successful connection, the pan-tilt status will be updated in real time at the lower left corner.

3.1.2 Turn on Video

The host computer supports two video input methods: USB capture card input and network input.

- 1) Make wiring according to the input method (completed before power-on).
- 2) As shown in Figure 5-1 and Figure 5-2, select the corresponding tab according to the input method.
- 3) Enter the video source for USB capture card input or the video stream address for network input.
- 4) Click the "Turn on Video" button (wait for a few seconds; if the connection is successful, the pan-tilt live video will be displayed in the video window).

3.2 Common Controls

3.2.1 Pod Rotation

Table 1

| No. | Button/Input Box | Functions | | | |
|-----|-------------------------------|---|--|--|--|
| 1 | Up/Down/Left/Right/Stop | Control the rotation direction of the pod. | | | |
| 2 | Center | Rotate the pod to the zero position. | | | |
| 3 | On/Off Motor | Control the power on/off of the motor. | | | |
| 4 | Azimuth Follow/Stop Following | Control whether the pod's azimuth axis follows the aircraft's rotation. | | | |
| 5 | Specified Angle | Control the pod to rotate to a specified angle (values in the azimuth and pitch input boxes). | | | |

3.2.2 Target Tracking

Table 2

| Functions | | | | |
|--|--|--|--|--|
| Track a specified target. | | | | |
| Cancel tracking. | | | | |
| Directly track the target at the center of the video. | | | | |
| Cancel tracking. | | | | |
| Turn on or off the person-vehicle recognition function. | | | | |
| Retain. | | | | |
| Suitable for tracking person-vehicle targets, and the tracking process will be corrected according to the recognition algorithm. | | | | |
| Traditional tracking algorithm that does not recognize targets. | | | | |
| Stop Start Tracking | | | | |
| | | | | |

ERDI LASER®

3.2.3 Image Display

There are mainly two types of display screens: visible light and infrared. Among them, infrared has two colors: white hot and black hot, and digital zoom can be performed on both visible light and infrared respectively.

Table 3

| No. | Button/Input Box | Functions | | | | |
|-----|---|--|--|--|--|--|
| 1 | OSD (On-Screen Display) Turn on or off the OSD (On-Screen Display) of the screen. | | | | | |
| 2 | Electronic Image Stabilization | Enable or disable electronic image stabilization (supported by some pods). | | | | |
| 3 | Low-Light Mode | Activate low-light mode when the illumination is dim. | | | | |
| 4 | Image Enhancement | Activate image enhancement mode when there is fog. | | | | |
| 5 | Local Image Capture | Retain. | | | | |
| 6 | Electronic Zoom | Enable or disable electronic zoom (supported by some pods). | | | | |

3.2.4 Laser Ranging

As shown in Figure 8, clicking the "Start Ranging" button enables the laser ranging function. The measured values can be viewed in the parameter display area, as shown in Figure 10.

3.3 Common Issues

3.3.1 Finding the Serial Port Number

Right-click the "Computer" icon, select "Properties", click Device Manager, and the interface shown in Figure 11 will appear. In general, the selected serial port number is the one that refreshes after inserting the connection cable (or port number). Double-click "Ports (COM & LPT)", and the refreshed USB port is the selected port.

| Pevice Manager | × |

| | |
| Image: Second control and control a | |
| | J |

Figure 11 Device Manager

3.3.2 No Network Video Output

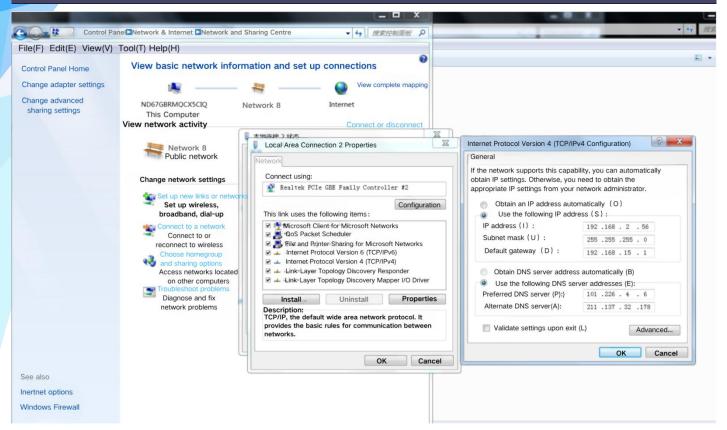

Figure 12 IP Address Modification

- 1) On the computer, open "Control Panel" \rightarrow Network and Internet \rightarrow "Network and Sharing Center";
- 2) Click the "Local Area Connection" icon \rightarrow "Properties", then double-click "Internet Protocol Version 4 (TCP/IPv4)";
- Ensure that the computer's IP address is in the same network segment as the video stream address. For example, if the video stream address is rstp://192.168.2.119/554, the computer's IP address can be set to 192.168.2.56;
- 4) Turn off the firewall;
- 5) Click the "Open Video" button on the host computer, and the imaging video will be displayed on the right side of the host interface.

PRECAUTIONS FOR USE AND MAINTENANCE

- 1. The daily maintenance tasks for operators are limited to replacing or inspecting cables, performing routine cleaning, and conducting functional checks to ensure the instrument remains in good technical condition.
- 2. Do not open the casing without authorization. There are no user-repairable components inside the machine. When a system failure occurs, the manufacturer's technical personnel should locate the fault before proceeding with repairs.
- 3. If the product is stored for a long period or not in use, it should be kept in a cool and dry environment.
- 4. When inserting user interface connectors, ensure they are aligned correctly before insertion. Do not pull directly on the cable when plugging or unplugging the connector.
- 5. All parameters of the product are debugged before leaving the factory. Unless otherwise specified, it is recommended to use the recommended configuration parameters.
- 6. If used on an aircraft, the overall performance is affected by the aircraft's weight, power system, flight control system, and user settings. Users must possess considerable professional capabilities and must debug the product to the approved performance before field use.
- 7. Under no circumstances should the thermal imaging lens be directed directly at the sun.

- 8. The SD card should be removed when the system is powered off.
- 9. Keep the front lens clean and free of debris.
- 10. The first four seconds after the pod is powered on are for automatic gyro calibration. During this period, keep the pod as stable as possible without vibration; otherwise, the gyro data from the last startup will be used. If the pod drifts, restart it or send a gyro calibration command.
- 11. The control software must run on a 64-bit system computer.
